INDUSTRIAL GOODS LOADING SYSTEM

Tarun Thathvik  Vedant Desai  Smrithi Thudi
Rpi has only 2 pwm pins

We used 3 servos - wrote our own pwm code
Low pass filter

```python
fs = 300
fc = 1
w = fc / (fs / 2)
b, a = signal.butter(5, w, 'low')
output = signal.filtfilt(b, a, xn)
x = np.average(xn[490:500])
plt.plot(xm, label='x')
plt.show()
```
Thank you
